SanoBlocks

Maintenance and odour elimination in urinals

... cleans, descales, deodorises

- ✓ With highly efficient enzymes and effective cleaning components
- ✓ Easy and safe application (tabs)
- ✓ Long-lasting elimination of odours from urinals
- ✓ lactic acid bacteria builds up a mild acidic environment which prevent uric salt from depositing on the surfaces.
- ✓ Gentle on materials, environmentally friendly
- ✓ Optimises drainage and flow performance
- ✓ Reduces maintenance and cleaning expenditure
- ✓ Biosurfactant-based, no aggressive alkalis, acids or biocides
- ✓ Long lasting, one block per month for a standard usage
- ✓ Sweet pine scent, leaves the urinal smelling fresh and clean

PRODUCT DESCRIPTION

SanoBlocks are water-soluble tabs that always ensure clean, odourless, problem-free and environment-friendly urinals thanks to their advanced formula consisting of various active ingredients.

- Biosurfactant-based formula in the product hydrolyse the organic urine components and effectively suppress the formation of ammonia and unpleasant odours.
- lactic acid bacteria create a mild acidic environment and prevent uric salt from depositing on the surfaces.

- Surfactants reduce surface tension, emulsify dirt components and reduce overall dirt adhesion.
- Sweet pine scent leave the treated urinal smelling fresh and clean
- Unlike other comparable products, SanoBlocks do not contain any biocides or highly acidic or alkaline substances. This makes SanoBlocks a very effective, yet environmentally and material-friendly maintenance product for all types of urinals. This is especially true for waterless models without a flushing mechanism.

SanoBlocks 

Brief information

Product form:
Tabs

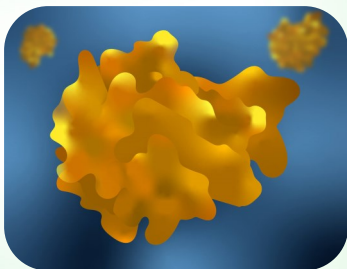

Active ingredients:

- Lactic acid
- Surfactants
- Fragrances

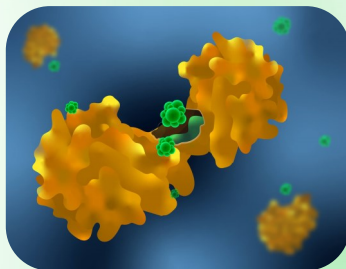

Package size:
480g can, 12 x 40g

Shelf life:
2 years

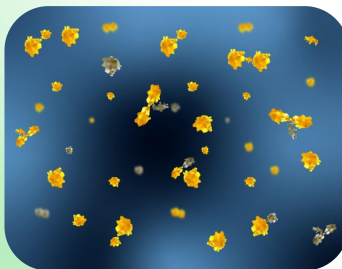

Enzymatic action:

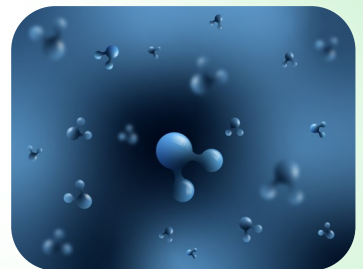

1. Traces of urine on the urinal surfaces start to smell bad due to bacterial decomposition.

2. When the biosurfactants come into contact with urine, they break it down into its components (water, salts, nitrogen).

3. The individual water-soluble components no longer let ammonia form.

4. It can be easily rinsed off, which prevents the formation of odours.

INSTRUCTIONS FOR USE

Place a SanoBlock tab in a basket placed on the urinal drain. When rinsing with water, the SanoBlock tab must make full contact with water whenever possible. Depending on the frequency of flushing, a new tablet must be placed in the urinal approximately every two weeks.

For waterless urinals: place the block so that it is in contact with the urine stream.

SanoBlocks

Technical data

State:	Tablet sticks
Colour:	Green
Density:	1,05g/cm ³
pH value:	7
Ingredients:	Bio surfactants, lactic acid, fragrances
Can contents:	12 tablet sticks, each 40g.
Packaging:	480g plastic container (12 sticks). 6 x 480g per box.
Precautionary measures:	Do not ingest. Keep away from children.
Storage:	SanoBlocks must be kept sealed in the original packaging. To prevent any loss of enzymatic effect, SanoBlocks must not be stored above 40°C or above 45% relative humidity.

Our application notes, both in written and verbal form, are based on extensive testing. We provide advice to the best of our current knowledge, but without any obligation insofar as the application and storage are beyond our direct control. Product descriptions or information about the properties of the preparations do not contain any statements concerning liability for any damage.
